

Think.

Critically assess
technology's
impact on society.

Code.

Understand and
build information
systems.

Transform.

Become a leader,
problem solver,
and innovator.

Philosophy & Computer Science

– An Interdisciplinary Master's Program –

Deepfakes, surveillance capitalism, algorithmic fairness: challenges like these cannot be addressed by technological solutions alone — they call for a broader perspective!

The interdisciplinary P&CS master's program trains a new generation of scientists and creative thinkers equipped to navigate the social, epistemological, ethical, and institutional challenges that modern information technologies raise. To this end, it combines training in computational skills with deep philosophical analysis.
